Chapter 3 Point 3.2

CAUSES OF FLOOD IN DISTRICT JHAJJAR:

Flooding in Jhajjar District is caused due to combination of the following factors:

- a. Accumulation of rain water in low lying areas.
- b. Sheet flows areas of Panipat and Jind District via Rohtak District.
- c. Excessive discharge in main Drain No.8 flowing into this District.
- d. Congestions in drain due to excessive rainfall.

There are several pockets of low lying areas in the District from which natural flow of water is not possible, is further acquainted by the existence of man-made barriers like the network of roads and canals, which obstruct the natural flow of water. Notable among these obstructions are the JLN and Jhajjar Sub Branch Canals as well as the state Highways passing through the District. Major damage to crop is caused due to flooding of such depression in the District:-

1. Due to its topographic configurations, rain water finds natural flow into Jhajjar District from District Panipat and Jind via Rohtak. High underground water table in the District and surrounding areas result in sheet flow water which moves from villages causing havoc and destruction.
2. Excessive discharge in drain No.8 caused two major problems in the Distt. Firstly, the dewatering of areas around drain No.8 cannot be started till the flood water from Panipat and Jind Districts is cleared and the drain No.8 is sufficiently depressed. This effects villages on both sides of drain No. 8 from village Bakra up to Bhindawas lake and water remains stagnant in these villages. Secondly, excessive discharge in drain No.8 can causes breach in the drain endangering not only rural areas but also Jhajjar town, as it happened during the floods in the year 1960, 1977, 1995 and 2010.

3. Flood havoc is also caused in the District due to inadequate capacity of major drainage network. In the event of excessive rain fall, congestion in the major drains effect crops in a large number of villages of the district. Apart from drain No.8, sometimes heavy congestion is caused in the catchments area of K.C.B (Kultana, Chhudani and Bhupania drain) due to non– cleaning of the drain in the Delhi territory.
4. Sahibi Nadi which flows from Rajasthan in to Haryana enters Jhajjar District near Village Rattanthal before joining the outfall of Drain No.8 at R.D.7408. Apprehension of heavy flooding cannot be ruled out due to excessive discharge in Sahbi Nadi. Similarly a tributary of Sahbi namely, Indro Nadi, also enters in the District from South East and the outfall drain No.8 carries its water to Delhi territory through Dhansa Regulator.

Vigilance is also required on the following points:-

1. Attempt is made by the villagers to cut roads or railway line for dewatering the flooded water from abadi on their fields, S.P. Jhajjar and respective S.D.M's and Executive Engineer's of the concerned departments to regulate patrolling of such palaces and send their reports to Deputy Commissioner.
2. Irrigation department will carry out the vigilance and patrolling where possibility of branches at drains/ link drain and Canal bundhs etc. is there.

Chapter – 5 Point 5.5

A. RING BUNDH

The work relating to repair of Ring Bundh is being carried out by the Panchayat Department every year. No budget has been allocated for repair/construction of Ring Bundh in the year 2014-15. List of ring bunds is attached as Annexure-I

1. Drain No.8 enters into Gohana Tehsil and has a design Capacity of 1600 cusecs. The actual capacity of this drain is around 3000 cusecs. The strengthening of the embankments of drain in valmerable reaches is being done and renovation of existing bridge is also being done time to time.
2. Near village Surehti , a regulator has been constructed at R.D 7408 and there after the drainage system consists of out fall Drain No.8 heaving only its left bank.
3. There are two other major aspects of this drainage net-work ,(1)Bhindawas lake which has an area of 800 acres and carries a storage capacity of 9600 acres feet of water . A regulator for controlling the flow of the water into Bhindawas lake is utilized for irrigation purpose through the J L N escape . There is also an escape from drain No.8 into the Loharu Feeder at Bakra Head.
4. Out fall Drain No.8 into the Loharu Feeder at Drain No.8 through regulator at Rd.7408 and Sahibi and Indori Nadi to regulator at Dhansa Bund . The total capacity of the regulator at the moment is 3000 cusecs. As and when Dhansa Bund regulator are remodeled as per the Sahibi Nadi Master plan, the total carrying capacity of this system would to up to 25000 cusecs (20000 cusecs regulated and 5000 cusecs unregulated)

B. KULTANA CHHUDANI BHUPAIA SYSTEM (K.C.B.)

1. Kultana – Chhudani- Bhupania drain has been excavated from village Luksar to village Simli of Rohtak District and there is reason to expect that there will not be acute flooding in catchment. The last village in its reach is Luksar . The portion of this system which takes its outfall into Mungeshpur has also been completed by Delhi Administration as well as by Govt ,of Haryana .However the Kultana – Chhudani- Bhupania system functions as a single unit up to its outfall into the Mangeshpur drain.
